

Insoft Infotel Quality Assurance Software for Db2® applications

DB/IQ : An Investment in Your Mainframe Performance for a Better EUX

DB/IQ is a suite of software solutions to ensure the integrity, performance and maintainability of Db2 applications

DB/IQ Quality Assurance for Db2 Applications (QA)

Ensures coding standards are maintained for greater performance and availability for all Db2 for z/OS applications.

DB/IQ Quality Assurance Plus for Db2 (QA+)

Monitors, explains, and alerts upon all dynamic SQL in your Db2 for z/OS systems.

DB/IQ QE for Db2 Eclipse Plug-In (QE)

Eclipse plug-in is fully compatible with RDz and adapts enterprise-wide standards for all development built outside the mainframe.

DB/IQ Workload Detector for Db2 (WL+)

Identifies high CPU consumers by analyzing entire applications - including QMF and ERP packages- as well as all SQL code from any source, both static and dynamic.

DB/IQ Index Administrator (IA+)

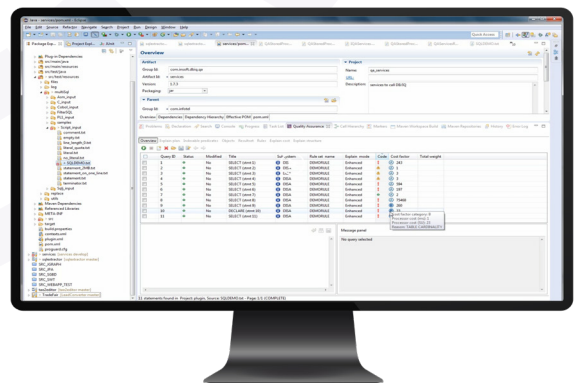

Redesigns the best indexes based upon your current application SQL and system activity to optimize overall Db2 application performance.

DB/IQ Migration Aid for Db2 (MA)

Recreates DDL using the Db2 Catalog information and facilitates migration operations between Db2 sub-systems.

DB/IQ Package Management for Db2 (PackMan)

Reveals inconsistencies between DBRMs, packages and load modules and cleans up the Db2 Catalog to ensure system integrity.

DB/IQ Modules QA+, Index Administrator, Workload Detector, and Eclipse Plug-In require the base product DB/IQ (QA). DB/IQ Migration Aid and DB/IQ Package Management are standalone software products.
